Practical - 2

Practical Title: Semantic HTML5 Pages with Accessibility-Ready Structure

A . Theory

Develop static HTML5 skeletons for at least 10 StudentHub pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly structure.

1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?

Yes. Semantic tags are used to organize the webpage into meaningful sections. They make the HTML code easier to read, improve accessibility, and help search engines understand the content.

2. Are form labels, headings, image alt text, and navigation links accessible?

Yes. Form labels clearly describe input fields, headings are used in the correct order, images have alt text for screen readers, and navigation links are easy to identify and use.

3. Is the page structure consistent across all pages?

Yes. All pages follow the same layout with a header, navigation bar, main content area, and footer. This provides a consistent look and makes the website easier to use.

B. Implementation/ Output/Result

Here is my GitHub repo link the codes are here in repo:
https://github.com/dhyaani19/StudentHub-Portal.git

Welcome to the Student Hub Portal. Here you can check your syllabus, attendance, timetable, results, and other academic information.

Latest Updates

- Math Assignment Uploaded
- DSA Quiz Tomorrow
- Web Development Practical Submission Open
- Faculty Meeting Notice

Your Submissions

Subject	Assignment	Status
Mathematics	Assignment 2	Submitted
Java	Practical 3	Pending
Web Development	Practical 3	Submitted

What's New Today

- Web Development Practical starts at 10:00 AM.
- Java Lab record submission is due this Friday.
- College Tech Fest registrations are now open.
- Updated timetable has been uploaded.

Syllabus

List of Subjects

- Mathematics
- DSA
- Web Development
- OOP Java
- Environmental Science

Detailed Syllabus

Subject	Main Topics
Mathematics	Matrix Algebra, Differential Equations
DSA	Arrays, Linked List, Stack, Queue
Web Development	HTML, CSS, JavaScript
OOP Java	Classes, Objects, Inheritance

Extra Questions

- Mathematics Practice Questions
- DSA Practice Questions
- Java Practice Questions
- Web Development Questions

D. GitHub Repository Link:

https://github.com/dhyaani19/StudentHub-Portal.git

E. Challenges Faced:

I found it a little difficult to understand the wireframe and decide where each element should be placed.
It was challenging to create the same layout shown in the wireframe using HTML.
I was confused about which HTML tags to use for different parts of the page.
While creating multiple pages, maintaining the same navigation and structure was a little difficult.
I faced some small errors like missing closing tags and incorrect file paths.
I had to check the pages again and again in the browser to make sure the structure was looking correct.

F. Learning Outcomes:

I learned how to understand a wireframe and convert it into a basic HTML page.

I learned how to use different HTML tags like <header>, <nav>, <section>, <form>, and <footer>.

I learned how to create the basic structure of a webpage using HTML.

I learned how to create and connect multiple HTML pages using links.

I understood the importance of proper indentation and closing HTML tags.

I learned how to check and fix basic errors by opening the webpage in a browser.
